## Part A: Oceans

5

A1. What does the topography of the ocean look like?	5
A2. What part of the world oceans does Australia own?	6
A3. What major geological movements have occurred in Australia?	7
A4. What happened in ice age Australia?	8
A5. What is climate change and how does it affect the ocean?	10
A6. Forces that cause ocean water to move	12
A7. How do ocean currents form?	14
A8. Currents around Australia and New Zealand	16
A9. How does the El Niño current affect thermoclines in the sea?	18
A10. What effect does El Niño cause?	19
A11. What is so special about the EAC?	20
A12. What is so special about the Leeuwin current?	21
A13. When do Australian ocean sea temperatures change?	22
A14. How is marine life in Australia governed by ocean temperature?	23
A15. What causes Tsunamis?	24

## Part B: Coastlines

26

B1. What are some characteristics of waves?	26
B2. How fast do waves travel?	27
B3. How does weather affect waves?	28
B4. What happens when currents approach a shore?	30
B5. How is sand made and transported in a coastal system?	31
B6. Why do tides change over the month?	32
B7. What happens to waves as they approach a beach?	34
B8. How does sand get onto a beach?	36
B9. What are sand dunes and how are they made?	37
B10. Can we classify sand grain sizes found on a beach?	38
B11. Can we determine the percentage composition of sand on a beach?	40
B12. How do you draw a beach profile?	42
B13. How do the dune cycles occur?	44
B14. What happens when the dune cycle is broken?	45
B15. When is beach nourishment a solution to coastal management?	46
B16. Can we make a model to identify coastal ecosystems?	50
B17. Can we use a template to show wave refraction?	52
C18. The active beach system	54
C19. Management of longshore drift	56

## Part C: Seawater and pollution

58

C1. How much plastic pollution is there in the sea?	58
C2. How much salt is in seawater?	59
C3. Can we make and establish a test for seawater?	60
C4. Can we determine how much oxygen there is in seawater?	64
C5. What effect does marine pollution have on dolphins?	66
C6. Why is DDT a problem in the marine food chain?	68
C7. What are some of our seas contaminated with?	70
C8. What effect does oil have on feathers?	72
C9. What happens in an oil spill?	74
C10. What impact do acid sulfate soils have on the sea?	78
C11. What effect does water quality have on the marine environment?	80
C12. How can impacts of coastal development be minimised?	82
C13. Practice essay on beach erosion	85

## Read this first

All information to answer the questions is contained in your textbook - *Marine Science for Australian Students* as shown in the Figure below.

- The aim of this enquiry based exercise book is to give you the opportunity to develop your knowledge and understanding of basic oceanography for further study either at university as a marine scientist or at TAFE as an interpretive tourist guide.
- The questions in this book are designed to help you practise answering different levels of literacy question (see page 591 of your textbook). For example harder questions have more challenging verbs such as *interpret*, *distinguish between* and *decide*, whereas easier questions will have verbs such as *name*, *state*, *label*, *list* or *complete*.

Your teachers can help you interpret and understand these verbs.

- To help get you started, key verbs have been underlined in Exercise A1 - What does the topography of the ocean look like?

(Illustration by Ivan Moffatt)

### Topography

The study of the shape of the land above and below the oceans is called **topography**. The ocean floor is divided into the continental margin, ocean-basin floor and mid-ocean ridges.

#### Continental margin

The **continental margin** (Figure 11.1) stretches out from the land as far as the eye can see. The average distance for the continental margin is 650 kilometres and its character varies from place to place. In Australia (Figure 11.2) it consists of the **continental shelf** (mostly fairly narrow), the **continental slope**, and the **continental rise**. In other parts of the world the continental margin can consist of a shelf, slope, deep-sea trenches and a broad ridge.

#### Odd facts

- The earth's tallest mountain, longest mountain range and deepest canyon are all in the ocean.
- The surface of Venus - millions of kilometres away and hidden by clouds of sulphuric acid - has been better mapped than the earth's sea bed (The Economist, 3 September, 1994).
- The Great Meteor seamount (submarine volcano) in the North East Atlantic has a basal diameter of over 100 kilometres and a height of four kilometres (The Times Atlas of the Oceans).
- Australia's very own underwater Grand Canyons - the Murray Canyons are deeper than America's Grand Canyon and more than twice the height of Australia's highest mountain, Mt Kosciusko. Scientists drilled long cores into sediment around the Murray Canyons system that has been deposited over the centuries by the Murray Darling river system. This information will hopefully allow scientists to chart the history of oceans and climate in this region every 100 years for the past 250,000 years.

## Part A: Oceans

### A1. What does the topography of the ocean look like?

#### Aim

- To explain ocean topography and relate it to Australia.

#### What to do

- Read pages 7 - 11 of your textbook and answer the questions below.

#### Questions

Q1. Describe how the world's oceans formed from the Earth's atmosphere.

---

---

Q2. Recall the mean depth of the ocean. Compare the depth of the Mariana's Trench with the height of Mt. Everest.

---

---

Q3. Identify the main features of Figure 11.1 of your textbook by completing the illustration below.

Q4. Complete and colour in the figure below to identify the main features of Australia's continental shelf.

## A2. What part of the world oceans does Australia own?

### Aim

- To explain the sub surface geology that determines seabed ownership by Australia.

### What to do

- Read pages 12 - 13, 22 of your textbook and answer the questions below. Then search for the following URL <http://www.ga.gov.au/news/archive/2008/april> to answer Question 6.

### Questions

Q1. Name the parts of the continental shelf that make up the geomorphic margin of Australia.

Q2. Complete the diagram below to identify the following - *Sea level, ridge, edge of rise, continent-ocean boundary, continent-ocean transition, foot of slope, rise, slope, sediments and shelf.*

Q3. Study page 22 of your textbook. Explain how the sediments in the rise of the geologic margin occurred. Mark these in the diagram above.

Q4. Study Figure 13.2 of your textbook and distinguish between the continental shelf and EEZ.

Q5. Explain how a knowledge of subsurface geology of the continental slope is important to Australia.

Q6. Use the press release from the Geoscience Australia Web Site below and amend your textbook first edition page 435. <http://www.ga.gov.au/news/archive/2008/april>. Explain what changed in 2008?

### A3. What major geological movements have occurred in Australia?

#### Aim

- To explain the principles of plate tectonics and how this has affected what Australia looks like today.

#### What to do

- Read pages 16 - 22 of your textbook and answer the questions below.

#### Questions

Q1. Interpret Figure 16.1 of your textbook and describe what happens in a mid ocean ridge.

---

---

Q2. Complete the diagram below to show how sea floor spreading occurs.

Q3. Describe what happens when oceanic crust collides with continental crust.

---

---

Q4. Complete the figure below to illustrate what has happened in Australia as a result of plate tectonics. Identify where you live.
